**HAVENS ANIMAL FEED**

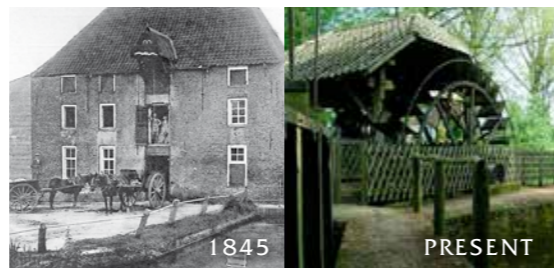

HAVENS located in Maashees (The Netherlands) is an innovative family owned business that was founded as early as in 1845. Today, HAVENS offers a wide and varied range of different premium feeds for hobby farming of various species.

**THE GREEN LINE CONCEPT**

The HAVENS Green-Line feed is different!

- The emphasis is on homogeneous and proportionate growth as prescribed by nature
- The feed is of course guaranteed to be 100% plant-based and contain no animal products.
- The many grains and high-quality raw materials ensure successful rearing and professional care of the adult animal.

In addition, all complete feeds contain high levels of vitamins and minerals for optimal health and immunity.

**A FAMILY BUSINESS**

The company started in 1845 when Godfried Kaanen, ancestor of the current directors, bought the water mill in Vierlingsbeek in the southeast of the Dutch province of Brabant.

**THE MUESE**

In 1923, the company was moved to its current location along the Muese river. The direct location on the Muese is very favourable, due to the accessibility of grain ships to deliver raw materials from France, Germany and other parts of the world (via the port of Rotterdam).

**QUALITY**

The high quality of the raw materials, the wide diversity in ingredients, the innovative production facilities and the consistent recipes make a bag of HAVENS feed very unique compared to alternative brands.

**55 COUNTRIES**

We are continuously developing and improving our feed products. Today we can proudly offer you a wide and versatile range. This range consists of pellets, mueslis and various mixes for poultry, rabbits, rodents, pigs, sheep, goats and other ruminants. There is a suitable feed for every animal and HAVENS is available in more than 55 countries worldwide.

**CERTIFIED PRODUCTION**

Composing feed is our profession and we always strive for the highest quality. HAVENS is GMP+ and SecureFeed certified. An array of rules applies within this strict quality system, from purchase of grains and raw materials to the production and delivery of the feed. All of course with the aim of producing only safe feed that meets the highest standards.

*The modern factory of HAVENS with direct location on the Muese; 30km north from Venlo.*

CATTLE	16 - 17
PIGS	18 - 19

**START PREMIUM**  
2.3 MM PELLET

ART.NR. 06501 - 25 KG/BAG

**Rearing feed for small chicks**

Start Premium is a 2.4 mm rearing pellet for core health that contains all important vitamins and minerals. The pellet has been specifically developed for chicks from hatching to 4-6 weeks and has an extremely exclusive composition for homogenous growth.

- Complete and comprehensive rearing feed for all (small) types of chicks and pullets (ornamental and purebred poultry, water and game birds)
- Also suitable for laying bantam chickens and quails, provided grit is added
- High level of easily digestible protein, extra amino acids and high-quality carbohydrates
- We recommend the Start & Grow as a successor

Also, for bantam chickens and quails

**START & GROW + NEO-AC**  
START & GROW PELLET - 3.0 MM PELLET

ART.NR. 06000 - 25 KG/BAG

**START & GROW MEAL**

ART.NR. 06001 - 25 KG/BAG

**For a healthy start**

Nutritious and complete rearing feed for natural and homogenous muscle development, available as both a pellet and a meal. Suitable for all kinds of poultry from hatchling to adult age.

- For all types of chicks and pullets (ornamental and purebred poultry, water and game birds)
- To be fed until approximately 18 weeks and as a successor from Start Premium
- Also, as a luxury food for exhibition animals
- High level of easily digestible protein, extra amino acids and high-quality carbohydrates
- Contains NEO-AC (\*see page 7)

**FREE RANGE LAYER-MEAL**  
STRUCTURAL MEAL

ART.NR. 06003 - 25 KG/BAG

**Structure-rich layers meal**

Extremely nutritious and complete layers meal from various grains and seeds, supplemented with all necessary vitamins and minerals. Ideal for all laying poultry and laying water or ornamental birds. The course structure ensures good and gradual absorption whilst stimulating foraging. With FREE-RANGE MEAL you lay the foundation for a healthy and natural egg.

- Complete poultry meal for all laying chickens and birds from start to finish
- With lots of easily digestible protein, extra amino acids and plenty of vitamins
- Contains extra calcium from 3 natural calcium sources for an optimal egg shell

No.1 Bestseller

IDEAL IN COMBINATION WITH FREE-RANGE GRAIN

**FREE RANGE LAYER-PELLET**  
3.0 MM PELLET

ART.NR. 06002  
25 KG/BAG

**Natural layers pellet**

Dust-free, richly vitaminized and mineralised layers pellet with a high grain content. Ideal for all laying poultry, free-range poultry and other laying birds. To be fed from increasing laying capacity at the beginning of the laying period until the end of the laying period. Composition is the same as FREE-RANGE MEAL.

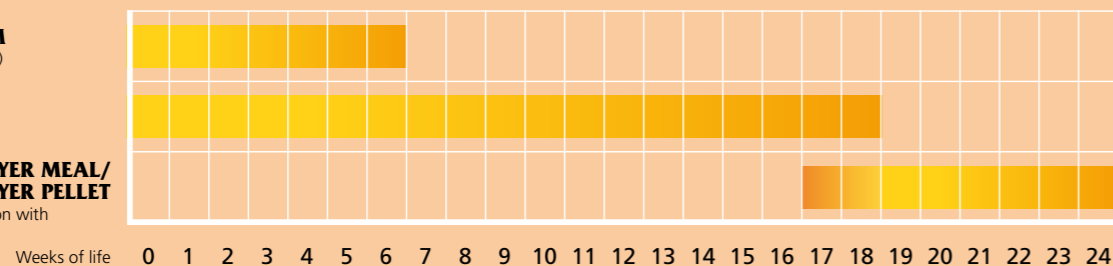

- Complete poultry meal for all laying chickens and birds
- Contains extra calcium sources for an optimal egg shell
- In pelletized form to avoid possibility of selective intake or spillage

**START PREMIUM**  
(for small chick breeds)

**START&GROW**  
(for all chick types)

**FREE-RANGE LAYER MEAL/  
FREE-RANGE LAYER PELLET**  
(possibly in combination with  
FREE-RANGE GRAIN)

## SCRATCHING GRAINS GRAIN MIX

ART.NR. 06504 - 25 KG/BAG

### Premium grain mix

Component-rich unmilled grain mixture including broken corn, sunflower seeds, barley, dari and without oats. Very suitable for all chicken species as well as for ducks, geese, turkeys and pigeons. Top quality!

- Without added vitamins or minerals
- Recommended as supplementary feed (in addition to FREE-RANGE LAYER-PELLET or/and LAYER-MEAL)

Supple-  
mentary  
feed

## DUCK AND PHEASANT GRAIN GRAIN MIX

ART.NR. 06506  
25 KG/BAG

Versatile grain mixture including cracked corn, wheat and milo-corn (but without barley, oats and sunflower seeds). Specially formulated for smaller chicken breeds, small duck species and especially for pheasants. Top quality!

Since it is free from protein-rich sunflower seeds, the feed is very suitable as a dietary feed for poultry with protein sensitivity.

Supple-  
mentary  
feed

## WW WATERFOWL PELLETS 3.0 MM PELLET

ART.NR. 06010 - 25 KG/BAG

Special duck feed in pellet form. Maintenance feed for all waterfowl, especially during winter to promote well-being and moulting.

- Low energy content for animals at rest
- Moderate protein content, composed of high-worthy amino acids to support fertility and laying capacity
- With extra vitamins such as vitamin E, folic acids and biotin
- For successful start to the breeding season and during the winter

## GOLDEN MEAT + NEO-AC

3.0 MM FINISHING PELLET

ART.NR. 06005 - 25 KG/BAG

Natural finishing feed for good meat quality. At Green Line, natural and homogenous growth is paramount. This is especially important in the fattening phase because the nutrition has a direct effect on the taste and structure of the meat. With GOLDEN MEAT finishing feed, you opt for natural and even growth and for an old-fashioned pure quality meat.

- 100% vegetable fattening and maintenance feed for all types of poultry and waterfowl in pellet form
- Extra soya oil for optimal meat structure and taste
- Extra vitamins and minerals to support a natural defence system
- No waiting time before slaughter
- Contains NEO-AC\*

### \*NEO-AC: TO STIMULATE THE IMMUNE SYSTEMM

The immune system has the complicated task of defending the body internally against harmful pathogens. Young animals are often still somewhat vulnerable but factors such as an unbalanced diet or adding new animals to group can also weaken the immune system. Therefore, often it can no longer act efficiently enough against pathogens. NEO-AC consists of a 100% natural cocktail of vitamins and an herbal extract to increase natural immunity and thus contributes to a healthy and problem free diet.

## POULTRY FEED GUIDELINE

The various poultry feeds provide building blocks, energy, minerals, vitamins and other elements that are indispensable for poultry. To provide the animals with all the necessary nutrients, we recommend that you feed the following amounts of chicken feed as a guideline:

- **Medium – large chicken breeds:**  
Approx. 100 – 130 gram per animal per day in total
- **Bantam and dwarf breeds:**  
Approx. 60 – 80 grams per animal per day in total
- **Chicks:** As needed

### FURTHER TIPS:

- Make sure that the daily ration consists of a maximum of 30% grain mixtures, as these do not contain added vitamins and minerals
- The chickens also like to receive vegetable or kitchen waste, such as peelings from vegetables or fruits, stale bread, rice and seeds. Feed this in moderation and preferably after they have finished their daily portion of poultry feed. Also make sure that you do not give too much at once as anything left becomes unsavoury and can attract other animals!
- Chickens must always have access to fresh and clean drinking water

HAVENS Nutritionist Esther Damen (feed development)

HAVENS sponsors various small animal shows in the Netherlands and Germany every year

## RABBITS

### KUNI EXCELLENT M-5 + NEO-AC 100% ORIGINAL AND NATURAL

3.0 MM PELLET

ART.NR. 04012

#### Finishing + rearing

A balanced and concentrated rabbit pellet that can be used as a rearing feed, problem solver or finishing feed. The feed can be fed at all stages of life, particularly with decreased immunity to disease.

- Easily digestible with lots of energy to grow
- Lots of structural fibres and extra lignocellulose fibres\* for healthy intestinal flora
- No wait time before slaughter
- Contains NEO-AC\*\*

#### \*LIGNIN

The addition of special dietary fibres, so-called lignocellulose fibres improve the intestinal flora for the rabbit.

- Several studies have shown that lignin has a positive effect on the immune system of rabbits
- The higher the proportion of crude fibre in the feed ensures better intestinal health and a more stable microflora in the large intestine

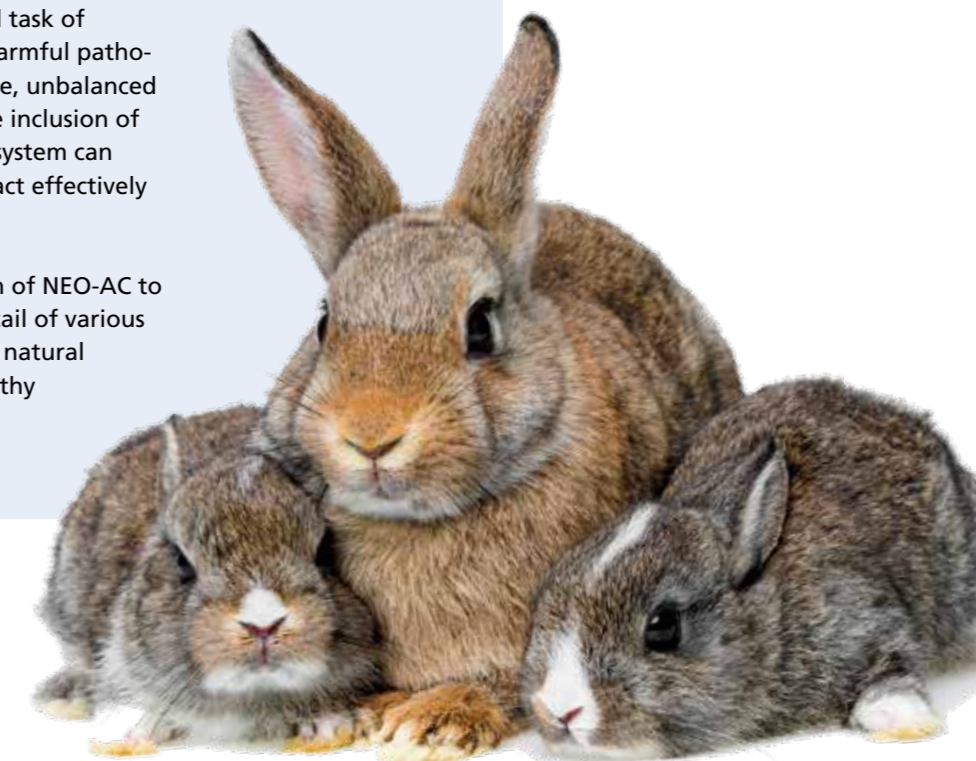

#### \*\*NEO-AC: SUPPORT THE DEFENSE SYSTEM

The immune system has the complicated task of defending the body internally against harmful pathogens. Due to factors such as little exercise, unbalanced nutrition, poor intestinal function or the inclusion of new animals in the group, the immune system can weaken and therefore often no longer act effectively enough against pathogens.

Kuni Excellent M-5 contains the addition of NEO-AC to stimulate the immune system. This cocktail of various vitamins and an herbal extract increases natural immunity and thus contributes to a healthy and problem-free diet.

Problem-free feeding

## KUNI-HOBBY PRO

3.0 MM PELLETT

ART.NR. 04008 - 25 KG/BAG

### All-round

All-round rabbit pellet with highly digestible vegetable proteins and energy rich, easily digestible carbohydrates. The food is very tasty and supports fertility, homogeneous growth and general condition. The food contains a high vitamin content for a natural immune system and resistance to diseases.

- With nutrient-rich high-quality raw fibres (lignocellulose fibres\* see page 9)
- High vitamin content (incl. Vit A and Vit E) for an increased immunity and even growth
- Dust free and easily digestible

## PREMIUM FIBER MIX

MUESLI

ART.NR. 04022 - 20 KG/BAG

+ Vit. C

Extremely exclusive rodent muesli with extra vitamins, minerals, amino acids and trace elements for increased general immunity. Made up of digested grains, alfalfa fibres, corn and barely flakes, carob and linoleic sunflower seeds. Easily digestible and very tasty!

- With extra fibres including alfalfa fibres for optimal digestibility and firm stool
- Suitable for all types of rabbits and rodents, and also for guinea pigs due to the added Vit. C

### SPECIALLY RECOMMENDED

- For varieties with rapid dewlap formation
- To prepare for shows/exhibitions
- To prepare for and support breeding
- Ideal for guinea pigs, mice, rats and other rodents

## HAVENS BRIX

ALFALFA BRIQUETTES

ART.NR. 05952  
14 PCS./BAG

- Pressed alfalfa briquettes with dried mint (99% alfalfa and 1% mint)
- Low sugar content (5.7%)
- Highly digestible protein (16.5% crude protein) and essential amino acids
- Free from grains and molasses
- Compact and easy to ration; ideal for exhibitions

## GUINEA PIG ANTI-STRESS + C

3.0 MM PELLETT

ART.NR. 04024 - 20 KG/BAG

The Guinea Pig Anti-Stress + C pellet is a complete pellet (3mm) for all guinea pig species, but also for other rodents and rabbits. The feed is composed of pure vegetable raw materials with a high fibre content. This provides optimal support for digestion. In addition, it contains a high level of vitamin C, extra amino acids (such as tryptophan and lysine) and magnesium. This makes the Guinea Pig Anti-Stress + C ideal before and after exhibitions!

- Contains 17.5% crude protein (with extra amino acids tryptophan, lysine and methionine) and is therefore ideal for breeding. The combination of tryptophan, Vit. E and magnesium provide a soothing effect in these situations.
- With lots of healthy fibres (from alfalfa, sunflower seeds, and oats) for optimal and problem-free digestion
- Lots of B-vitamins, biotin and Vitamin E for a healthy coat
- Lots of extra shine due to the use of vegetable oils
- And of course with stabilised Vitamin C (4,000 mg per kilo) for optimal condition and to support the immune system
- Ideal for guinea pigs, but also rabbits and other rodents

## FIBRE DICE

HAY/ALFALFA CUBES

ART.NR. 05951  
17.5 KG/BAG

Very tasty large cubes of chopped timothy hay (51%), alfalfa (48%) and dried apple pieces (1%).

- Extra-large pellets (3x3cm with alternating lengths) for as much structure as possible, giving animals a lot to gnaw on.
- 1.5% starch, 5% sugar and without the addition of molasses, vitamins or grains
- Dried with warm air; free from dust and mould
- Very tasty

## FEED GUIDELINE RABBITS

The quantity of pellets or muesli that a rabbit should have depends on the size of the animal and the stage of life the rabbit is at.

As a general guideline:\*

SIZE	WEIGHT	FEED PER ANIMAL PER WEEK
Large breeds	More than 5 kg	Approx. 125 - 180 g
Medium breeds	3-5 kg	Approx. 90 - 150 g
Small breeds	1-3 kg	Approx. 30 - 90 g
Dwarf breeds	Less than 1 kg	Approx. 25 - 30 g

\* Pregnant and lactating rabbits need unlimited food and water.

### FURTHER TIPS:

- It is important to always have fresh and clean drinking water available to the animals
- To provide appropriate and hygienic housing alongside optimal nutrition to support the well being of the animals and increase the immunity to diseases
- To support the animal's natural immune system, we recommend providing complete vitaminized feed
- To check your animals' teeth regularly. Unbalanced growth and wear of the incisors could possibly lead to serious problems.

## L&S MUESLI FOR LAMBS AND SHEEP

ART.NR. 04505 - 25 KG/BAG

L&S Muesli consists of a cocktail of concentrates, generalized grains (corn and barley flakes) and a high content of alfalfa fibre in an optimally balanced composition with ample levels of vitamins and minerals.

### CHARACTERISTICS OF L&S MUESLI:

- A generous calcium-phosphorus ratio in combination with a deliberately low phosphorus level
- Very tasty for rapid intake of solid food by lambs. This ensures optimal growth, disease resistance and the fast and good development of the rumen
- Lots of structure and a high fibre content so that sheep have to chew better and therefore choke less. The risk of esophageal blockages are minimized
- Contains essential herbal oils

This muesli can be fed to ewes and their lambs in unlimited quantities.

## LAMB ENERGY CUBES

3.0 MM PELLET

ART.NR. 04501 - 25 KG/BAG

Concentrate feed for finishing lambs that is especially adapted to the complex nutritional needs of lambs, ideal as a successor to the L&S Muesli.

### CHARACTERISTICS OF LAMB CUBES H.E.:

- Complete rearing feed and finishing feed for all types of lambs
- Contains a lot of proteins, all necessary amino acids and a lot of energy (H.E. = High Energy)
- To be fed from the moment the lambs start eating the ewes regular feed or as a follow-up to the L&S muesli
- Low mineral content

## SHEEP BREEDER CUBES

3.0 MM PELLET

ART.NR. 04502 - 25 KG/BAG

Complete feed for all pregnant and lactating ewes. Feeding sheep and ewes in particular is very dependent on the phase they are in:

- The condition around covering must be good. Ewes that are becoming lean or fat find it more difficult to get pregnant
- The embryos start to develop strongly from 3 months until they are born. Due to the growing lambs in the womb, the contents of the gastrointestinal tract decrease, which reduces feed intake and the feed therefore has to become increasingly concentrated
- During the lactation period a ewe must be able to produce sufficient milk for her lamb

### CHARACTERISTICS OF SHEEP BREEDING CUBES:

- Concentrated and protein rich pellet (16.5% crude protein)
- Contains all important vitamins and minerals
- Stimulates fertility and milk production
- Also, for hobby sheep

### FEEDING GUIDELINE FOR SHEEP AND SMALL RUMINANTS:

- During maintenance: approximately 20 grams of feed per kg body weight per day of total feed intake. At least 75% of this must be good quality roughage, the remainder pellets or muesli
- Growing animals may be given approximately 25 grams per kg body weight per day
- Lactating animals need even more, as a guideline 40g per kg body weight per day of total feed intake (75% roughage)

### NB:

These general guidelines are highly dependent on breed, gender, type, movement, roughage quality, activity, current body weight, condition etc.

## G-R START-MUESLI

MUESLI

ART.NR. 02517 - 25 KG/BAG

The G-R Start-Muesli is a structure-rich rearing feed that stimulates the rumen function of young goats and other small ruminants when switching from milk to concentrates. The better the rumen is developed, the fewer problems arise during weaning, such as diarrhea and pneumonia. Improved disease resistance allows young animals to continue to grow better.

### CHARACTERISTICS OF G-R START MUESLI:

- With lots of alfalfa fibres, digested grains and rumen stabilizers
- Contains extra vitamins for more disease immunity and less or no energy dip after weaning
- Stimulates the digestion and start of young goats
- Can be fed from a few days old as soon as the young animal eats with its mother
- **Ideal for alpacas**

## GOAT/DEER CONDITION CUBES

4.0 MM PELLET

ART.NR. 02073  
25 KG/BAG

All-round condition cube for all goat types, deer, gazelles and other small ruminants with a constant composition and taste

### CHARACTERISTICS OF GOAT CONDITION CUBES

- Concentrated feed which leads to a lower consumption amount
- High protein (17.0% crude protein)
- Contains all important vitamins and minerals for healthy disease immunity
- Also suitable for sheep breeds that DO require copper

## COW JUNIOR+

3.0 MM PELLETS

ART.NR. 02060 - 25 KG/BAG

COW Junior + is a very tasty and easily digestible rearing pellet that ensures optimal rumen development in calves. The structure and construction of the rumen wall and papillae begin a few days after birth when feeding a good calf muesli, such as our Multi-START. COW Junior+ fits seamlessly with this, ensuring that this development continues optimally.

Good rumen development benefits the health of the animal for the better. By properly developing the rumen at a young age, the calf will be able to absorb more and more efficient nutrients later on.

Aimed at optimal **rumen development**

Tasty protein sources for **optimal growth and development** of the calf

Enriched with **high levels of vitamins, minerals and trace elements**

Contains **oregano** to increase **intestinal health**

Nice **tasty pellet**

## MULTI-START

MUESLI

ART.NR. 02520 - 20 KG/BAG

Multi-START is a tasty, complete rearing muesli that consists of a mixture of grains, gelatinised grains, vitamin pellets and COW Junior+ calf pellets.

### CHARACTERISTICS OF MULTI-START:

- Lots of structure and gelatinised grains to stimulate rumen development and optimal digestion
- Supports healthy growth and disease immunity
- The ideal starter feed for all young ruminants (except copper-sensitive sheep)
- Can be fed from a few days old as soon as the young animal eats with its mother

### NUTRITIONAL VALUES:

VEM	985
VEVI	1,060
DVE	100 g
OEB	1 g
Crude protein	148 g
Crude fat	31 g
Crude fibre	53 g
Starch	343 g
Calcium	9.3 g
Phosphorus	4 g
Vit A	19,650 IE
Vit D3	3,770 IE
Vit E	201 mg
Copper	19.9 mg

### NUTRITIONAL VALUES:

VEM	930	Calcium	12 g
VEVI	990	Phosphorus	5.4 g
DVE	100 g	Vit A	24,800 IE
OEB	10 g	Vit D3	5,400 IE
Crude protein	160 g	Vit E	100 mg
Crude fat	34 g	Vit C	100 mg
Crude fibre	125 g	Copper	27 mg
Starch	179 g		

### FEEDING ADVICE:

Can be fed from birth or as a successor to the Multi-START calf muesli, up to the age of approximately 12 months.

COW Junior+ may be fed ad libitum in addition to roughage. Always ensure unlimited access to roughage and fresh drinking water.

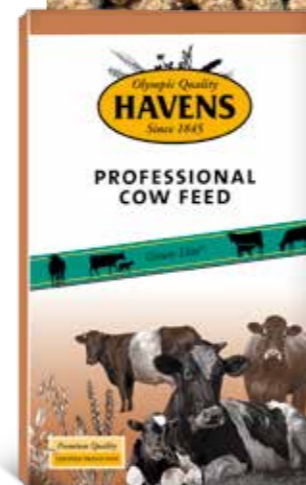

## COW COMPLETE

4.5 MM PELLET

ART.NR. 02063 - 25 KG/BAG

Our COW Complete is a luxurious universal pellet for all types of cattle, which is suitable for maintenance, growth/finishing, gestation and lactation. It is fed as a supplement to unlimited roughage and provides the animals with high-quality vitamins, minerals, trace elements, proteins and energy. In addition, COW Complete contributes to vitality, a beautiful coat and good hoof quality.

We recommend using COW Complete as a successor to COW Junior+.

### NUTRITIONAL VALUES:

VEM	950	Calcium	11 g
VEVI	1,010	Phosphorus	5 g
DVE	115 g	Vit A	24,000 IE
OEB	25 g	Vit D3	5,000 IE
Crude protein	186 g	Vit E	100 mg
Crude fat	43 g	Vit C	100 mg
Crude fibre	120 g	Copper	23 mg
Starch	135 g		

Easily digestible all-round pellet with ample vitamins to promote **natural disease resistance**

Contains extra **high-quality protein** to support **growth and milk yield**

For optimal **muscle growth and condition**

Contains **rumen-resistant B vitamins, vitamin C and extra omega 3 fatty acids** from linseed oil

Contains **organic selenium** for optimal functioning of the **immune system**

Nice **tasty pellet**

### FEEDING ADVICE:

To be fed as a successor to COW Junior+ from an age of approximately 12 months.

The amount of COW Complete to be provided is strongly depending on body weight, condition, quality of the roughage and the amount of energy it contains animal consumed. Cattle are not allowed to fatten. Always ensure unlimited access to good roughage and fresh drinking water.

A general guideline:

- For maintenance requirement: approx. 250g COW Complete per 100kg body weight per day
- During gestation the feed requirement hardly increases. Overweight cows are at risk of health problems during calving
- For suckler cows and meat starters: approx. 500g per 100kg body weight per day
- For lactating cows: approx. 600g per 100kg body weight per day depending on milk yield and the number of days in lactation

## PIGLET START

### 3.0 MM PELLETT

ART.NR. 01110 - 25 KG/BAG

Piglet Start has been specially formulated by HAVENS Feeds for young piglets. When piglets are weaned they will have to meet their daily nutritional needs without their mother's milk. That weaning moment is crucial in the life of a young piglet. It is therefore wise to provide small amounts of solid food before weaning, in addition to the sow's milk. Piglet Start is formulated on this basis and is suitable to be given approximately 2 weeks before weaning and up to a maximum of 12 weeks old.

To make the transition from the sow's milk to solid food as gradual as possible, Piglet Star contains a high percentage of dairy components. The presence of dairy guarantees good intestinal function, while the piglet's gastrointestinal tract gets used to the presence of other raw materials. In addition to dairy, Piglet Start only contains vegetable products.

Piglet Start is also provided with extra gelatinised grains which the piglet experiences as tasty. The high content of vitamins and trace elements, together with the added essential fatty acids, ensures that the animal's health develops optimally.

#### NUTRITIONAL VALUES:

Crude protein	16.8 %	Crude ash	5.6 %
Crude fat	4 %	Calcium	0.6 %
Crude fibre	3.4 %	Phosphorus	0.5 %

#### NUTRITIONAL VALUES:

Vit. A	15,000 IE	Vit. B12	40 mcg
Vit. D3	1,000 IE	Choline-Chloride	150 mg
Vit. E	125 IE	Pantothenic acid	22 mg
Vit. K3	1.5 mg	Niacin	40 mg
Vit. B1	1 mg	Folic acid	2 mg
Vit. B2	6 mg	Biotin	300 mcg
Vit. B6	1.5 mg	Copper	90 mg

 Piglet Start is supplied as a 3 mm pellet for **easy feed intake**

 **Very tasty** due to the inclusion of gelatinised grains

 **High proportion of dairy components** for a smooth transition from breast milk to solid food

 **High vitamin content and essential fatty acids** to support intestinal function and health

#### FEEDING ADVICE:

This is a complete animal feed and can be used as the only feed in addition to free access to water. A new born piglet primarily needs sows' milk. Our advice is to supplement Piglet Start from 2 weeks before weaning.

Provide as sole food up to and including 8 weeks of age as needed. You can also feed other simple feed materials up to 12 weeks of age.

See also the instructions for the use on the label.

## PIG ALLROUND

### 4.0 MM PELLETT

ART.NR. 01007 - 25 KG/BAG

Pig All-round has been developed by HAVENS Feeds as a universal pig feed for breeding animals, free-range pigs kept as a hobby, as well as for traditional meat production. For breeding animals, it contains nutrients that support fertility and milk production. For that purpose, Pig All-round offers, among other things, high protein quality. It is ideally suited for the use in meat production.

The intake of Pig All-round is guaranteed due to a healthy basis of grains and grain by-products. In order to maintain good, skin/hair function and other body processes, vegetable oil with high linoleic acid content has been used and omega 3 fatty acids have been added.

#### NUTRITIONAL VALUES:

Crude protein	14.5 %	Crude ash	5.9 %
Crude fat	4 %	Calcium	0.8 %
Crude fibre	5.6 %	Phosphorus	0.5 %

#### NUTRITIONAL VALUES:

Vit. A	6,500 IE	Vit. B12	23 mcg
Vit. D3	1,000 IE	Choline-Chloride	350 mg
Vit. Hy-D	25 mcg	Pantothenic acid	12 mg
Vit. E	80 IE	Niacin	20 mg
Vit. K3	1.5 mg	Folic acid	4 mg
Vit. B1	1 mg	Biotin	500 mcg
Vit. B2	3.5 mg	Copper	15 mg
Vit. B6	1 mg		

Pig All-round is supplied as a **4 mm grain**

**Has a high digestibility** mainly focused on fertility and body development

**Is well vitaminized with extra protein** and therefore ensures good growth and milk yield

Contains Hydroxy-D for support of **optimal fertility** and bone function

**Lots of grains** and tasty vegetable oils smooth feed intake

**Coarser ground** which has a positive effect on the activity and health of the stomach and intestinal tissue

#### FEEDING ADVICE:

Due to its sophisticated composition, it can be provided as the only feed material but is certainly also suitable for use in addition to other feed materials. Can be used next to free access to water.

See also the instructions for the use on the label

#### Rule of thumb:

- Maintain an amount of 1% of the weight as maintenance food
- For highly productive animals this can easily be doubled. If you provide other feed materials this quantity will be smaller.
